FUNCTIONS

Technical data

- Probe cycles: the core probe temperature controls the cycle ensuring control and precision.
- Time cycles: the set duration controls the cycle.
- Timer cycles: 6 different timers can be set that automatically

warn when the set duration is reached.

- Cascade cycles with multiple probes installed: the cycle allows to set a different target temperature for each installed core probe.

- Cascade cycles with one probe installed: this is a singlephase cycle with infinite time that allows different foodstuffs to be treated continuously without the need to act on the controller.

- Quick start: it is possible to choose a preferred cycle for quick start.
